How does the Biofuels Benchmarking Labor Survey Work?

Annually plants complete an online questionnaire in regard to their employee benefits package. Salary and wage information is also completed by job responsibility code to ensure employee compensation is being accurately compared.

Plant data inputs are open for a limited time after January 31 of the new year. This data is then quality checked by C&A industry analysts with reports released on the website for participant review and use in March. Reports include: a benefit report, base and total wage report, tenure analysis and overtime reports. These reports can be customized using specific participation attributes to enhance the comparative results with other participants. These specialized participant groupings can be based on geographical region, entity structure, plant production capacity, and other areas that may affect the results.

Why should my plant participate in the Labor Survey?

The Biofuels Benchmarking Labor Survey is the Ethanol industries most comprehensive labor survey available. The results of the survey can be used by participants to understand the industry standard benefits package, assist when performing an employee review and hiring as well as to make plant's competitive and reduce employee turnover.

Biofuels Benchmarking Labor Survey is FREE to current Benchmarking participants.

Non - Benchmarking participants may purchase the survey for a cost of \$1,000. However, this fee can be applied as a credit if the labor survey participant decides to subscribe to the full Biofuels Benchmarking program within 90 days of the labor survey report release.

Please refer to the Biofuels Benchmarking program on the C&A website for more information on the full program and how it can help your plant identify its strengths and weaknesses and improve profitability.
